

# Day 4 - Dynamic Frontend Components - Oak&Teak

---

## 1. Functional Deliverables:

---

### ○ Product Listing Component:

Dynamically render product data in a grid layout, including name, price, image, and stock status.

Arc Econo Executive Chair

~~45000~~ 41400.00

Majestic Sofa Set

45000

Quest Dresser

35000

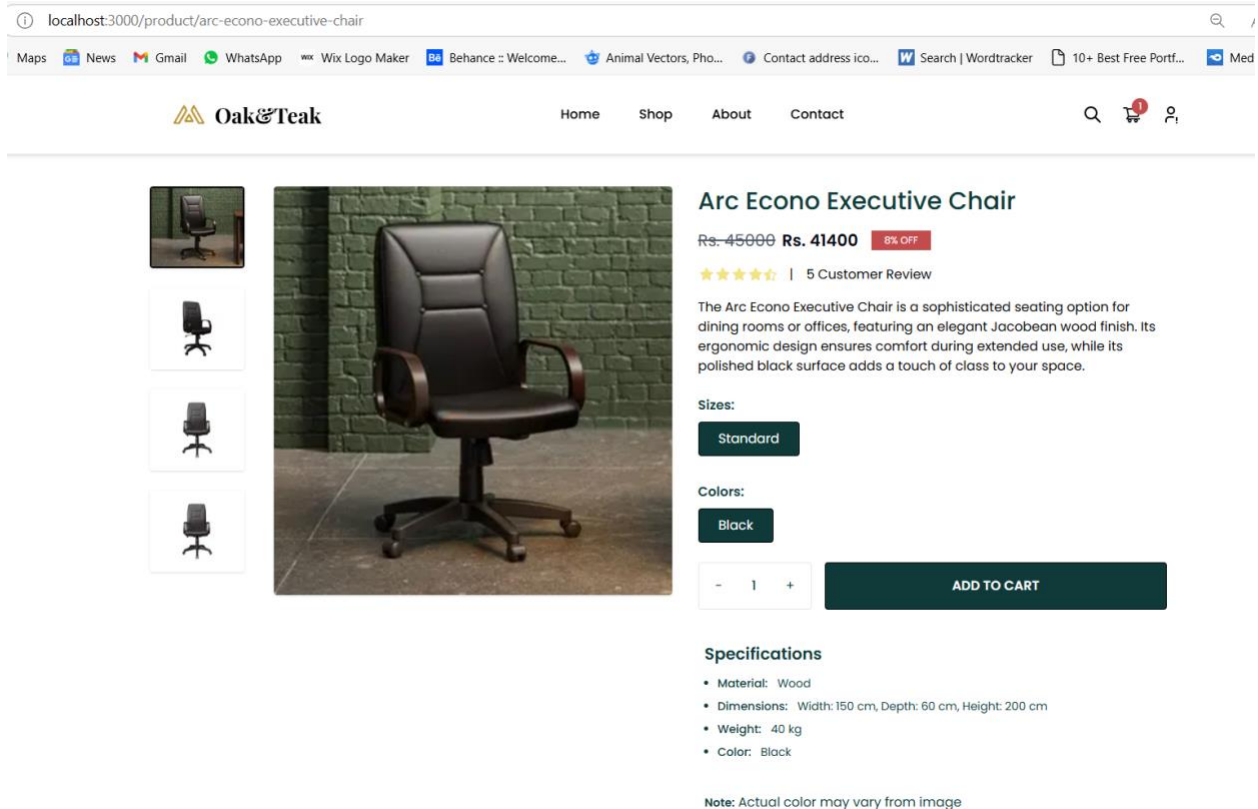

Royal Cocoa Dining Table

55000

## ○ Product Detail Component:

Create individual product pages with detailed fields like description, price, sizes, and colors.

## ○ Category Component:

Display categories dynamically, enabling filtering by selected categories.

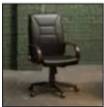

## Shop By Category

### ○ Cart Component:

Display added items, quantity, and total price, using state management for cart tracking.

## Your Cart

Product	Subtotal	Quantity	
 <div>Arc Econo Executive Chair Black   Standard</div>	Rs. 41400	<div>- 1 +</div> <div></div>	<div><h3>Cart Totals</h3><div>SubtotalRs. 41400</div><div>Total Items1</div><div>Proceed to Checkout</div></div>

### ○ Pagination Component:

Break product lists into manageable pages with previous and next buttons.

- **Filter Panel Component:**

Provide filtering options like price range, brand selection, and availability toggles.

- **Suggested Products Component:**

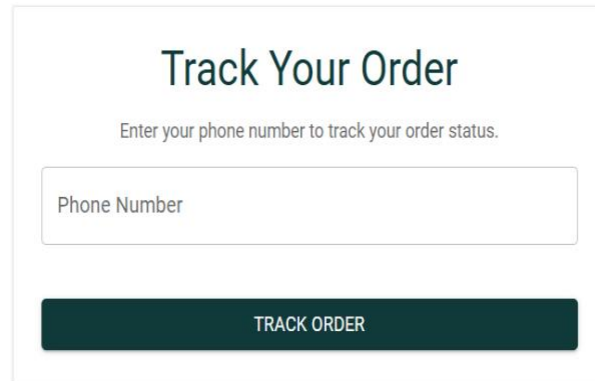

Suggest similar products based on tags, categories, or customer behaviors.

**You may also like**

- **Order Tracking Component:**

Provide real-time updates on order status, including estimated delivery and location.

A form titled "Track Your Order" with a subtitle "Enter your phone number to track your order status." It features a text input field labeled "Phone Number" and a dark green button labeled "TRACK ORDER".

Track Your Order

Enter your phone number to track your order status.

Phone Number

TRACK ORDER

## 2. Code Deliverables:

- **ProductCard**

```

import { CardProps } from "../../types/cardProps";

const Card: React.FC<CardProps> = ({ data }) => {
  const salePrice = data.discountPercentage
    ? (data.price - (data.price * data.discountPercentage) / 100).toFixed(2)
    : undefined;

  const isSoldOut = data.inventory <= 0;

  return (
    <div className="group text-custom-green w-[300px] space-y-4 relative">
      { /* Tags */ }
      <div className="absolute left-2 z-40 top-2 space-y-2">
        {isSoldOut ? (
          <div className="bg-gray-400 text-white text-xs px-4 py-1">
            SOLD OUT
          </div>
        ) : (
          data.discountPercentage !== undefined &&
          data.discountPercentage > 0 && (
            <div className="bg-[#c34d4d] text-white text-xs px-4 py-1">
              {data.discountPercentage}%OFF
            </div>
          )
        )}
      </div>

      { /* Image Container */ }
      <div className="relative w-full h-[280px] md:h-[300px] flex items-center justify-center bg-transparent">
        { /* Default Image */ }
        <Image
          src={data.img}
          alt={data.heading}
          layout="fill"
          objectFit="cover"
          className="transition-opacity duration-300 opacity-100 group-hover:opacity-0"
        />

        { /* Hover Image */ }
        <Image
          src={data.hoverImg}
          alt={` ${data.heading}-hover`}
          layout="fill"
          objectFit="cover"
        />
      </div>
    </div>
  );
};

```

## ○ ProductDetail

```

import ProductImages from "@components/ProductImages";
import { notFound } from "next/navigation";
import {
  fetchProductBySlug,
  fetchRelatedProducts,
} from "@sanity/schemaTypes/dataFetchUtils";

interface ProductDetailsProps {
  params: Promise<{ slug: string }>;
}

const Product = async ({ params }: ProductDetailsProps) => {
  const { slug } = await params;
  const product = await fetchProductBySlug(slug);

  if (!product) {
    notFound();
  }

  // console.log(product)
  const relatedProducts = await fetchRelatedProducts(product.category, slug);

  return (
    <section className="space-y-12 py-10">
      <div className="max-w-screen-xl mx-auto grid grid-cols-1 lg:grid-cols-2 gap-8 md:gap-0">
        <ProductImages images={product.imageUrls} />
        <ProductData product={product} />
      </div>
      <hr />
      <RelatedProducts relatedProducts={relatedProducts} />
    </section>
  );
};

export default Product;

```

```

"use client";

import React, { useState } from "react";
import { AiFillStar } from "react-icons/ai";
import { FaStarHalfAlt } from "react-icons/fa";
import CartItemSheet from "../cart";
import { useCart } from "@app/context/cartContext";
import { toast } from "react-hot-toast";
import { Productdetail } from "../../types/product";

export interface ProductDataProps {
  product: Productdetail;
}

const ProductData: React.FC<ProductDataProps> = ({ product }) => {
  const [showCart, setShowCart] = useState(false);
  const [quantity, setQuantity] = useState(1);
  const [activeSize, setActiveSize] = useState<string>(product.sizes[0]);
